How To Install NodeJs + NPM (Linux)

1. Head to the official repository for Node.js distributio

The link is right here: https://github.com/nodesource/distributions. Head there and scroll down to find the correct command to copy and paste to install the version of Node you would like

2. Start Node.js Installation

After you pick out the command, just have to run it, it will add the corresponding Node.js source to your sources.list, which then you can just run `sudo apt-get install nodejs` which will install the correct version that you have selected

3. Verify Installation

Run `node -v` and `npm -v` to verify that both of the tools are installed.
